

# **UniquifyLabels Documentation**

Module name: UniquifyLabels

**Description**: Makes row and column labels unique

Author: Joshua Gould (Broad Institute), gp-help@broad.mit.edu

#### Summary:

Makes row and column labels unique. For example if the label 'foo' occurs three times in the input file, the output file will contain the labels 'foo', 'foo-1', and 'foo-2'.

## Parameters:

Name	Description
input filename	input filenameres, .gct, .odf type=Dataset
output file	output file
make.row.labels.unique	whether to make the row labels unique
make.column.labels.unique	whether to make the column labels unique

#### Return Value:

1. The output file in the same format as the input file
