ConcatenateFilelist Documentation

Description: Concatenates a list of files into a single large file.

Author: Peter Carr, Marc-Dane Nazaire, gp-help@broadinstitute.org

Summary

This module takes a list of files and appends all of them into one large file.

Parameters

Name	Description
filelist	A text file containing a list of file paths. Note that this module will not concatenate binary files.
num header lines	The number of header lines that are in the file paths. Header lines specified here will be included only once in the output file.
output filename	The name of the output file.

Output Files

1. <output.filename>
   A file containing a concatenation of all of the files specified in the file list.
